ABOUT

19 years building and transforming enterprise platforms — mostly in financial services, insurance, and industrial sectors. I work closely with CTOs and senior technology leaders as a long-term partner: helping think through real architecture trade-offs, making sure what gets promised in an RFP actually gets built, and staying hands-on through delivery to see it through. AWS Certified Solutions Architect. Published on microapp architecture and mobile strategy at Infosys.

CORE COMPETENCIES

Architecture & Advisory — Solution & Enterprise Architecture | Domain-Driven Design | Trade-off Analysis | Short & Long-term Roadmapping | ARB Leadership | Microservices | Domain APIs

Cloud Platforms — AWS (EKS, Lambda, RDS, Aurora, S3, EC2, Amplify, Connect, Redis) | Azure (AKS, Container Services) | Kubernetes PaaS/IaaS

GTM & Customer Engagement — CTO-Level Advisory | RFP Solution Leadership | Customer Relationship Management | Voice of Customer | Go-to-Market Strategy

AI & Emerging Tech — Generative AI | LLM Integration | Hyper-Personalization | Conversational AI

Integration & Data — gRPC | Apache Kafka | Event-Driven Architecture | API Design

Delivery — DevSecOps | CI/CD | Agile | Cross-functional Leadership | Change Management

CERTIFICATIONS & THOUGHT LEADERSHIP

- AWS Certified Solutions Architect (2020)
- Published two Infosys whitepapers: *Microapp Architecture with Domain-Driven Design* and *Hybrid vs. Native Mobile App Development*
- Presented at internal engineering conferences and client RFP sessions — often influencing which direction a client went technically and which vendor they chose

EXPERIENCE

Northwestern Mutual | Apr 2025 – Present

Solution Architect – Planning Solutions

Represent Planning Solutions at the enterprise Solution Architecture Roundtable (SART). The day-to-day is a mix of working with product and engineering to make sure we're building the right things and keeping the architecture honest as features evolve.

- **gRPC Integration:** Moved the Planning Experience off legacy MQ to gRPC for its Algorithm and Calculation service integrations — better latency, cleaner contracts between services, and easier to evolve independently
- **Active Listening AI (ALAI):** Built a GenAI/LLM tool that listens to advisor-client conversations and pulls out structured financial facts, cutting down manual fact-finding time significantly
- **Financial Planning Platform & Data Import Manager:** Designed the Domain API layer and a centralized data hub that brings client data from multiple sources into one place for advisors to review and approve before it flows downstream
- **Advisor Joint Work & Co-Client:** Set up secure multi-advisor collaboration and enterprise-level co-client integration with proper entitlement controls — both features requiring careful coordination across multiple teams

Infosys Limited | Oct 2007 – Apr 2025

Spent 17+ years here, growing from engineer to director. Worked with clients across financial services, insurance, and industrial sectors — not just on RFPs but through the full lifecycle. Built real relationships with client teams, helped them make architecture decisions they could live with long-term, and owned delivery to make sure those decisions actually made it into production.

ATP Tour — Digital Transformation | 2025 | Principal Architect & Strategic Advisor

Worked with the ATP Tour to map out a 3-year technology transformation covering Tournament Operations and Player Experience — with a focus on what newer players on tour actually need. Helped leadership work through competing priorities and make concrete investment decisions across the roadmap.

Komatsu — Member Experience Portal | Apr 2024 – Apr 2025 | Director, Digital Products

Ran a 24+ person cross-functional team building a fleet management portal for Komatsu distributors and machine owners across Construction, Mining, and Forestry. The business needed it in 10 months — we delivered it. Platform is targeting 85% growth in after-sales parts revenue by end of 2025.

Leading Retirement Record Keeper — Digital Transformation | Apr 2022 – Apr 2024 | Principal Architect, Digital Products

Worked directly with the CTO to define the transformation strategy for their retirement services platform, then stayed to lead the architecture and engineering through delivery on Azure.

- Ran the ARB process — got formal sign-off on a modernized architecture that satisfied both business and regulatory requirements
- Built out B2B2C experiences for Members, Advisors, Plan Sponsors, and TPAs — including a micro-market segment that didn't exist before
- Plan onboarding went from 25 days to 32 hours. Micro-market grew ~45% YOY. Operational efficiency up 64%.

Northwestern Mutual — Insurance Servicing Modernization | Apr 2021 – Mar 2022 | Solution Architect & Engineering Manager

Moved the Life, DI & LTC servicing platform from a tangle of point-to-point integrations to an event-driven model on AWS. Set up a Kafka event hub so that when underwriting approved a contract, everything downstream — issuance, policy updates, reporting, commissions — could react independently. Ran on EKS with Lambda, RDS, Aurora, S3, and Redis. Turnaround time dropped from 24 to 14 days; operational efficiency up 25%.

Movement Mortgage — Marketing & Servicing Platform | Aug 2020 – Mar 2021 | Solution Architect

Designed a platform on Azure Container Services that connected their Marketing, Servicing, and Communications systems — previously disconnected. Mortgage issuance grew 150% the following year.

Northwestern Mutual — Enterprise Document Management | Jul 2017 – Jul 2020 | Lead Developer, Solution Architect & Engineering Manager

Built out a document management platform that replaced microfilm and microfiche across Life Insurance business areas. Set CI/CD standards, managed department onboarding, and helped the organization fully decommission legacy document infrastructure.

Northwestern Mutual — Earlier Projects | 2011 – 2017 | Tech Lead & Solution Architect

Worked across the Contracts Production Platform (freed up 12 FTEs through low-touch processing), Sales Illustration Platform (NAIC-compliant tools that helped advisors close more business), and Enterprise Electronic Forms — progressively taking on more architecture and leadership responsibility across each.

Earlier Roles | 2007 – 2011

Senior Engineer across G2B Portal (Govt. of India), a Re-Insurance Intranet, and a British Telecom Service Portal.

EDUCATION

B.E. Electrical Engineering | Birla Vishwakarma Mahavidyalaya – Sardar Patel University, India | 2003–2007

VOLUNTEERING

Girls in Tech Program (2025–Present) | EE&T Pathway Leadership Mentor (2026) | NW Mutual Hi-Tech STEM Outreach & Kids Reading Program (Pre-2021)
